Terminology is an independent journal with a cross-cultural and cross-disciplinary scope. It focuses on the discussion of (systematic) solutions not only of language problems encountered in translation, but also, for example, of (monolingual) problems of ambiguity, reference and developments in multidisciplinary communication. Particular attention will be given to new and developing subject areas such as knowledge representation and transfer, information technology tools, expert systems and terminological databases. Terminology encompasses terminology both in general (theory and practice) and in specialized fields (LSP), such as physics; biomedical sciences; technology; engineering; humanities; management; law; arts; business administration; trade; corporate identity; economics; methodology; and any other area in which terminology is essential to improve communication.
